

More 2010 Fishing Machines

by North American Fisherman Editor Kurt Beckstrom

Online Rating: ★★★★★★☆☆(9/10)

Ranger

Ranger's new 2310 Bay is a completely new design for the inshore fishing scene, built through feedback from tournament anglers, elite captains and guides. Following the previously introduced 2410 Bay Ranger, the new 2310 brings updated features and distinctive details to anglers preferring a slightly smaller, more maneuverable rig.

Ideal for anglers along the Gulf Coast and other popular inshore destinations, the new Ranger measures 23 feet, 4 inches and is rated for a maximum 300 horsepower. With 80-gallon fuel capacity there's plenty of range and the newly designed bow with more flare provides a very smooth, dry ride.

An ultra-modern sheer line produces a large front casting deck with minimal gunnel height for easy fighting of big fish. And the rear deck features a full transom, eliminating the need for a splash well while offering more efficient space to fish.

The new saltwater boat also features a redesigned console for bigger electronics and integrates three stand-up, rocket launcher-style rod holders on each side and a forward-mounted removable cooler that doubles as a comfortable seating location. A new leaning post provides more rod storage and built-in dry storage for trolling motor batteries. The unique stowable jump seats can be deployed in a matter of seconds.
